RE: MSDS #251

Dear R.R.Lally;

As per your request, the enclosed Material Safety Data Sheets (MSDS) for subject product is being furnished to assist you in complying with your obligation to provide a safe work place under OSHA Regulations. A safe work place will only be achieved if this data is known and understood by your staff. It will be your responsibility to distribute this information and to educate and train your personnel to properly use this product.

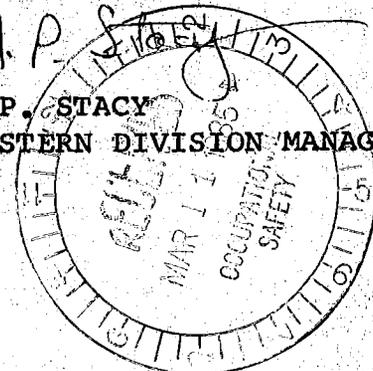

The Coating Industry has adopted the MSDS as a uniform and convenient method for communicating data relative to the hazardous properties of products and the protective measures to be adopted during their use. It can't be taken as sum total of all protective measures to be taken. Therefore, standard reference works on ventilation, toxicology, and fire prevention must be consulted to adequately utilize this data contained on the MSDS.

Sincerely,

CRESCENT BRONZE POWDER CO., INC.

A. P. STACY
